

## Government and corporations insure vaccine safety, trust em?

Doctors follow protocols dictated to them by government regulatory agencies, insurance companies and vaccine manufacturers. By trusting your doctor you are essentially trusting these entities.

Do you believe the 6 statements below:

- 1) Government agencies are often-times ineffective, wasteful, biased or even corrupt?
- 2) The top priority of corporations is their bottom line?
- 3) Most drugs, even non-prescription drugs like aspirin, can have serious side effects?

But “magically” when it comes to vaccines:

- 4) Government regulatory agencies (CDC,FDA,HHS) perform 100% in the public interest?
- 5) Manufacturers and insurance companies act altruistically giving out ‘free’ vaccines?
- 6) Side effects are nominal, serious ones are so rare you needn’t worry about them?

Realize mass media (TV, radio, magazines, social media) have conflicts of interest. Media corporations must make money for their stakeholders, so who are their customers? NOT you and I, but advertisers, the largest being pharmaceutical companies. Would you criticize the products of your best customers? We are being given a very one sided perspective on vaccine safety in mainstream media.

**LearnTheRisk.org** don’t be another submissive, compliant person succumbing to mass media and group think. Vaccinating yourself and your kids is a big decision; it has had serious consequences for 100,000s of people. [Share this flyer with a friend.](#)
